1.0 General Descriptions**1.1 Introduction**

The M140NWR2 is a color active matrix thin film transistor (TFT) TN liquid crystal display (LCD) that uses amorphous silicon TFT as a switching device. It is composed of a TFT LCD panel, a timing controller, voltage reference, common voltage, column driver, and row driver circuit. This TFT LCD has a 14.0-inch diagonally measured active display area with resolution (1,366 horizontal by 768 vertical pixel array).

1.2 Features

- 14.0" TN TFT LCD Panel
- LED Backlight System
- Supported (1,366x768 pixels) Resolution
- Compatible with RoHS Standard

1.3 Product Summary

Items	Specifications	Unit
Screen Diagonal	14.0	Inch
Active Area	309.399 (H) x 173.952 (V)	mm
Pixels H x V	1,366 (R/G/B) x 768	-
Pixel Pitch	0.2265×0.2265	mm
Pixel Arrangement	R.G.B. Vertical Stripe	-
Display Mode	Normally White (TN)	-
White Luminance	200	cd /m ²
Contrast Ratio	500	-
Response Time	8	msec
Input Voltage	3.3	V
Power Consumption	3.8 (Max.)	watt
Weight	355(Max.)	g
Outline Dimension	323.5(Typ.) ×192.0(Typ.) ×5.2 (Max.)	mm
Electrical Interface (Logic)	Single LVDS	-
Support Color	262 K	-
Optimum Viewing Direction	6 o'clock	-
Surface Treatment	AG	-

2.0 Absolute Maximum Ratings**Table 1 Absolute Ratings of Environment**

Item	Symbol	Min.	Max.	Unit	Conditions
Supply Voltage	VDD	-0.5	4.0	V	-
Supply V_LED Voltage	V_LED	6	21	V	-
Input Signal	-	-0.3	2.6	V	LVDS signals
Operating Temperature	TOP	0	50	℃	(Note)
Operating Humidity	HOP	10	80	%RH	(Note)
Storage Temperature	TST	-20	60	℃	(Note)
Storage Humidity	HST	10	90	%RH	(Note)
Vibration	-	-	1.5G 10-500Hz Random	G Hz	30Mins for X, Y, Z axis
Shock	-	-	220G 2ms	G ms	Half sign wave

Note:

- (1) Maximum Wet-Bulb should be 39 degree C. No condensation.
- (2) When you apply the LCD module for OA system. Please make sure to keep the temperature of LCD module is less than 60℃
- (3) Storage /Operating temperature

4.0 Optical Characteristics

The optical characteristics are measured under stable conditions as following notes

Table 2 Optical Characteristics

Item	Conditions		Specification			
			Min.	Typ.	Max.	Note
Viewing Angle [degrees] K=Contrast Ratio>10	Horizontal	Left	40	45	-	A, B,C
		Right	40	45	-	
	Vertical	Up	10	15	-	
		Down	30	35	-	
Contrast Ratio	Center		400	500	-	A, B,D
Response Time [ms]	Rising		-	3	-	A,B,E
	Falling		-	5	-	
	Rising +Falling		-	8	12	
Color Chromaticity (CIE1,931)	Red	x	Typ. -0.03	0.590	Typ. +0.03	A,B
	Red	y		0.345		A,B
	Green	x		0.340		A, B
	Green	y		0.570		A, B
	Blue	x		0.150		A, B
	Blue	y		0.120		A, B
	White	x	0.263	0.313	0.363	A, B
	White	y	0.279	0.329	0.379	A, B
White Luminance [cd/m^2]	-		170	200	-	5Points A,B, F
Luminance Uniformity [%]	13Points		67	-	-	A,B, G
	5Points		80	-	-	

Note:

A. Measurement Setup:

The LCD module should be stabilized at given temperature for 15 minutes to avoid abrupt temperature change during measuring. In order to stabilize the luminance, the measurement should be executed after lighting backlight for 15 minutes in a windless room.

InfoVision Optoelectronics (Kunshan)Co., Ltd.

Document Title	M140NWR2 R2 Product information			Page No.	9/29
Document No.		Issue date		Revision	01

Figure 4 Measurement Setup

B. The LED input parameter setting as:

V_LED: 12V ($\pm 0.1V$)

PWM_LED: duty 100 %

C. Definition of Viewing Angle

Figure 5 Definition of Viewing Angle

D. Definition Of Contrast Ratio (CR)

The contrast ratio can be calculated by the following expression

$$\text{Contrast Ratio (CR)} = L_{63} / L_0$$

L63: Luminance of gray level 63, L0: Luminance of gray level 0

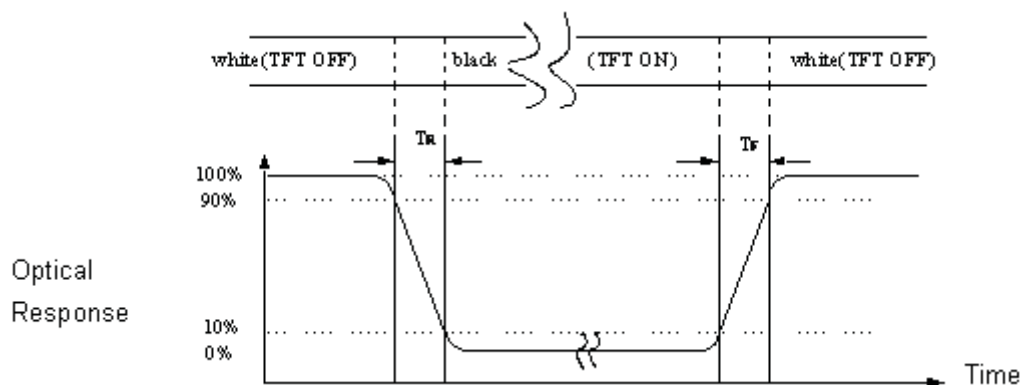

E. Definition Of Response Time (T_R , T_F)

InfoVision Optoelectronics (Kunshan)Co., Ltd.

Document Title	M140NWR2 R2 Product information			Page No.	10/29
Document No.		Issue date		Revision	01

Figure 6 Definition of Response Time

F. Definition Of Luminance White

Measure the luminance of gray level 63 at center point

Display Luminance= $(Y_1+Y_2+Y_3+Y_4+Y_5) / 5$

Figure 7 Measurement Locations Of 5 Points

G. Definition Of Luminance Uniformity(Variation)

Measure the luminance of gray level 63 at 13 points.

$$UNF(13pts) = \frac{\min(Y_1, Y_2, \dots, Y_{13})}{\max(Y_1, Y_2, \dots, Y_{13})}$$

5.0 Backlight Characteristics

5.1 Parameter Guideline Of LED Backlight

Table 3 Parameter Guideline for LED Backlight

Symbol	Parameter		Min.	Typ.	Max.	Units	Condition
V_LED	LED Input		6	12	21	[V]	Ta=25℃ Note B
V_PWM_EN	PWM Signal Voltage	High	2.5	-	5.5	V	Ta=25℃
		Low	-	-	0.5	V	
FPWM	Input PWM Frequency		100	200	1K	Hz	-
V_LED_EN	LED Enable Voltage	High	2.0	3.3	5.5	V	Ta=25℃
		Low	0	-	0.5		
LT	LED Life Time		10,000	-	-	Hours	Ta=25℃ Note A
PWM	Duty Ratio		5	-	100	%	-

Note:

A: The LED life time define as the estimated time to 50% degradation of initial luminous.

B: A higher LED power supply voltage will result in better power efficiency. Keep the V_LED between 12V and 21V is strongly recommended.

13.0 General Precaution**13.1 Use Restriction**

This product is not authorized for use in life supporting systems, aircraft navigation control systems, military systems and any other application where performance failure could be life-threatening or otherwise catastrophic.

13.2 Handling Precaution

- (1) Please mount LCD module by using mounting holes arranged in four corners tightly.
- (2) Do not disassemble or modify the module. It may damage sensitive parts inside LCD module, and may cause scratches or dust on the display. IVO does not warrant the module, if customers disassemble or modify the module.
- (3) If LCD panel is broken and liquid crystal spills out, do not ingest or inhale liquid Crystal, and do not contact liquid crystal with skin. If liquid crystal contacts mouth or eyes, rinse out with water immediately. If liquid crystal contacts skin or cloths, wash it off immediately with alcohol and Rinse thoroughly with water.
- (4) Disconnect power supply before handling LCD module
- (5) Refrain from strong mechanical shock and /or any force to the module.
- (6) Do not exceed the absolute maximum rating values, such as the supply voltage variation, input voltage variation, variation in parts' parameters, environmental temperature; etc otherwise LCD module may be damaged. It's recommended employing protection circuit for power supply.
- (7) Do not touch, push or rub the polarizer with anything harder than HB pencil lead. Use fingerstalls of soft gloves in order to keep clean display quality, when Persons handle the LCD module for incoming inspection or assembly.
- (8) When the surface is dusty, please wipe gently with absorbent cotton or other soft Material. When cleaning the adhesives, please use absorbent cotton wetted with a little Petroleum benzene or other adequate solvent.
- (9) Wipe off saliva or water drops as soon as possible. If saliva or water drops Contact with polarizer for a long time, they may causes deformation or color Fading.
- (10) Protection film must remove very slowly from the surface of LCD module to Prevent from electrostatic occurrence.
- (11) Because LCD module uses CMOS-IC on circuit board and TFT-LCD panel, it is Very weak to electrostatic discharge, Please be careful with electrostatic Discharge .Persons who handle the module should be grounded through adequate methods.
- (12) Do not adjust the variable resistor located on the module.

13.3 Storage Precaution

- (1) Please do not leave LCD module in the environment of high humidity and high temperature for a long time.
- (2) The module shall not be exposed under strong light such as direct sunlight.

**InfoVision Optoelectronics (Kunshan)Co., Ltd.**

Document Title	M140NWR2 R2 Product information			Page No.	26/29
Document No.		Issue date		Revision	01

Otherwise, Display characteristics may be changed.

- (3) The module should be stored in a dark place. It is prohibited to apply sunlight or fluorescent light in storage.

13.4 Operation Precaution

- (1) Do not connect or disconnect the module in the "Power On" condition.
- (2) Power supply should always be turned on/off by 9.0 "Power on/off sequence"
- (3) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference should be done by system manufacturers. Grounding and shielding methods may be important to minimize the interference.
- (4) After installation of the TFT Module into an enclosure, do not twist nor bend the TFT Module even momentary. At designing the enclosure, it should be taken into consideration that no bending/twisting forces are applied to the TFT Module from outside. Otherwise the TFT Module may be damaged.

13.5 Others

- (1) Ultra-violet ray filter is necessary for outdoor operation.
- (2) Avoid condensation of water which may result in improper operation or disconnection of electrode.
- (3) If the module keeps displaying the same pattern for a long period of time, the image may be "sticked" to the screen.
- (4) This module has its circuitry PCB's on the rear side and should be handled carefully in order not to be stressed.

13.6 Disposal

When disposing LCD module, obey the local environmental regulations.

InfoVision Optoelectronics (Kunshan)Co., Ltd.
